## Bug fixes and other improvements:

- Added export and launch right-click menu options for all binary files
- SIM id-Cloner does not erase log between read and write sessions
- Fixed issue with locked files and subsets
- Fixed issue with large notes under the case view
- Word export will be created even if a certain picture cannot be imported
- Nokia call lists: Showing correct number where different numbers exist on the same index
- Fix for USB enumeration, ignore attached failed devices that have no driver installed
- Showing correct log message when Obex fails to read a file

***For additional orders please use the .XRY order form (excel file). Please e-mail [sales@msab.com](mailto:sales@msab.com) to receive a standard form.***
